Science > Chemistry > Physical Chemistry > Ionic Equilibria > Buffer Solutions In this article, we shall study the concept of buffer solution, its characteristics, its types, and preparations. Buffer Solution: A solution, which resists the change in its pH value, even on the addition of a small amount of strong acid or base is called a buffer solution or buffer.

Buffer Solution: Its characteristics, types and preparations

Properties of good buffer: The buffer should be non-toxic; The buffer should be able to penetrate cell membrane and should not absorb light at UV or visible region; Buffer should have adequate buffering capacity; Buffer should not form insoluble complex with any anions or cations in the reaction. Role of buffer in vitro:

Properties of Buffer Solution. Buffer solutions are certainly resistant to changes in pH. However, the pH of a buffer solution can change if there is an addition of sufficient strong acid or strong base. Buffer capacity refers to the amount of strong acid or base a buffer solution can take before significant pH changes take place.
